

LEGACY VIEW & ACCESSORIES

Located in Ashland, Ohio, where it was founded in 1995, CSI Water Treatment Systems is a division of Chandler Systems, Inc., a family of companies with decades of experience bringing new and innovative technologies and products to the water treatment industry.

Our CSI Water team is dedicated to improving water quality through the development of water treatment products, design engineering services and educational programs to provide the utmost in quality and support for our valued customers.

PRODUCT OVERVIEW

Many common problems cause your water to have a bad taste or smell, to stain and water spot fixtures, or even shorten the life of pipes and appliances. Regardless of the water problems you're experiencing,

CSI Water Treatment Systems offer solutions!

- Softer Skin & Hair
- Improved Taste & Smell
- Removes Harmful Contaminants From Drinking Water
- No More Staining on Clothes or Fixtures
- Extends Life of Appliances & Hot Water Tanks
- Makes Cleaning Easier With Less Soap Required!
- Saves Money Monthly on Energy, Cleaners & More!

The New S4 Valve Superior Sturdy Design

- Patented Piston Allows User to Shut Off Water or Bypass Treated Water from the App
- Vertical Screw Drive for Precise Piston Movement
- Bluetooth App Control Simplifies Setup and Operation
- Heavy Duty Motors

Most water contains more than just water! In the air, water vapor can mix with sulfur from smokestacks, forming an acid that falls back to the ground. As water passes through the earth to the water tables below, it dissolves minerals and other substances including bacteria, fertilizers and insecticides. Depending on where you live, contaminants from sewage, industrial waste and agricultural run-off can also seep into your water supply.

Experience the difference of a well-hydrated life with water free from both natural and man-made impurities. Enjoy water that tastes better, protects your plumbing and appliances, keeps skin and clothes feeling softer, and saves you time and money.

Make the switch to cleaner, healthier, better-tasting water for every tap in your home.

SOFTENING SYSTEMS

CABINET SOFTENER

- S4 / Legacy View Bluetooth enabled control valve for advanced diagnostics and simplified setup
- Ideal for applications where space is limited and high service flow rates are not required
- Also available in high efficiency

STANDARD TWO TANK & CITY SOFTENER

- S4 / Legacy View Bluetooth enabled control valve for advanced diagnostics and simplified setup
- Many different configurations available to meet your specific needs*
- Also available in high efficiency

TWIN SERIES SOFTENER

- Legacy View Bluetooth enabled control valve for advanced diagnostics and simplified setup
- Provides 24/7 soft water and progressive flow ensuring constant water treatment for higher usage applications

WHY SOFTEN YOUR WATER?

Hard water is caused by elevated levels of dissolved calcium and magnesium. These minerals are responsible for soap scum, water spots on fixtures, and the premature wear of everyday appliances. In fact, hard water often requires 20–30% more energy to heat and up to four times the amount of soap and detergent for cleaning and laundry. CSI Water Softeners provide an effective solution, eliminating hard water issues such as spots on dishes and fixtures, while also preventing mineral buildup in pipes and drains.

*Other configurations available: The TerminatR (High Capacity Softener), The OptimizR (Combination Softener and Filte), Tannin / Hardness, Nitrate / Sulfate, and Squat

FILTERING SYSTEMS

WHOLE HOUSE FILTER

- S4 / Legacy View Bluetooth enabled control valve for advanced diagnostics and simplified setup
- Many different configurations available to remove sediment, bad tastes or odor, low amounts of iron or correct the pH at high service flow rates
- Simply select and add the desired filter media
- No chemicals required
- Ideal for applications where the filter media requires backwashing
- Natural color tank with dome hole fill port available

CSI offers a versatile range of filters that can be used to neutralize acidic water, remove chlorine, filter out sediment, or to improve your water’s taste, odor, and color. Just as different water sources present their own unique problems, our variety of filter types—including a wide selection of media and cartridge options—can be custom-tailored to provide you with a solution.

MONSTR FLOW

- High-flow, whole-house filter utilizing replaceable cartridges
- Simply select the proper cartridge for your application
- No chemicals required
- Great for removing bad tastes, chlorine, chloramines and sediment

UPFLOW FILTER

- Economical alternative for applications that do not require backwashing
- Simply select and add the desired filter media
- No chemicals required
- Ideal for correcting pH problems with neutralizer or removing chlorine with carbon
- Natural color tank with dome hole fill port available

*Other filters available: Arsenic / Heavy Metals, Pioneer DROP Cartridge Filter, PFAS Removal System (POU), Fresh Tap, Upflow, Ultrafilter, Premium Side Mount, Premium Side Mount Upflow, and Squat.

AERATION SYSTEM

SIDEKICK

- Air is injected into the top of the tank converting ferrous iron to ferric iron after untreated water has passed through the control valve
- S4 / Legacy View Bluetooth enabled control valve for advanced diagnostics and simplified setup
- Air draw cycle can be initiated without a backwash cycle saving 1000's of gallons of water annually
- The control valve slowly releases compressed air charge prior to backwash cycle eliminating the explosive blast that can dislodge the drain line

REACTR SYSTEM

- S4 / Legacy View Bluetooth enabled control valve for advanced diagnostics and simplified setup
- Designed for use with submersible pumps
- Optional VS unit includes oil-less air compressor, electronic contact flow meter with relay box for use with constant pressure or jet-type pump systems
- No chemicals required
- Optional Oxy option available for media disinfection
- Requires two tanks
- Ideal for removal of higher levels of Iron, Sulfur, and Manganese

NITRO

- Works with any type of well pump system
- Signature 3 / Legacy View Bluetooth enabled control valve for advanced diagnostics and simplified setup
- No chemicals required
- Only requires one tank
- Ideal for removal of lower levels of Iron, Sulfur and Manganese
- Air draw cycle can be initiated without a backwash cycle saving 1000's of gallons of water annually

Aeration systems use the natural power of oxygen to reduce iron, manganese, and hydrogen sulfide in water. As air is introduced, these contaminants oxidize into solid particles that can be easily removed through filtration. This process not only improves water quality by eliminating unpleasant tastes and odors, but also helps prevent staining on clothing, fixtures, and appliances. Best of all, aeration systems rely solely on the air we breathe, delivering clean, fresh water without the need for harmful chemicals.
